

International Space Archives

International Space Archives

- International Space Archives felt that NASA alone was too restrictive, so the archives have been greatly expanded and assets are being gathered from public, private and government agencies for this master space archive.

<http://www.InternationalSpaceArchives.com>

- The archive contains 500,000 images available for the first time at high resolution suitable for reproduction. Much of this imagery is only available via the Archives.

International Space Archives

- We have images covering all aspects of the past 50 years and we are constantly adding new images to the archive, including photos from the private collections of NASA astronauts.

International Space Archives

- Licensees are permitted to use imagery of the NASA meatball if the logo is an integral part of the image, for example if the logo is featured on a space shuttle or any other imagery.

International Space Archives

- Image Fortress through Bradford Licensing/Licensing Management International will assist with detailed instructions, a comprehensive review of applications and guidance on the proper procedure in applying to NASA for permission to use the NASA meatball logo

International Space Archives

- Many NASA films and videos have been digitized and indexed and are available exclusively from the Archives, including video from the private collections of NASA astronauts.

International Space Archives

- Access to NASA experts for editorial contributions, interviews, forewords, etc
- The Archive site features associated metadata information and much editorial content is available to licensees. In addition, the Archives is creating much content that does not currently exist in terms of oral and video histories from retired astronauts and NASA employees

International Space Archives

- The “Official imagery from NASA, National Aeronautics and Space Administration” attribution line may be used and/or the following logo/attribution:

INTERNATIONAL SPACE ARCHIVES

Featuring Authentic Imagery from NASA
